VEDANT SALUNKHE

Highly motivated Computer Engineering student developing AI and machine learning solutions using Python, Node.js, and API integration. Proven ability to deliver projects in OCR, computer vision, and data processing. Seeking opportunities to build scalable AI systems and backend automation tools.

EDUCATION

Modern Education Society's Wadia College of Engineering, Pune 2022 – 2026
Bachelor's Degree in Engineering

Sir Padampat Singhania School, Kota 2019 – 2020
SSC

Mahatma Phule Junior College, Pune 2021– 2022
HSC

SKILLS

Programming
Python, JavaScript

Databases
MongoDB, MySQL

Frameworks & Libraries
React.js, Node.js, TensorFlow, OpenCV

Backend
Node.js, REST APIs, SQL

Tools & Platforms
VSCode, Git/GitHub, Google Cloud

Soft Skills
Problem-Solving, Leadership, Team Collaboration

L a ngua ge s
English (Fluent), Hi ndi (Fluent), Marathi (Native)

ACHIEVEMENTS

What is Generative AI

PROJECTS

Real-Time License Plate Recognition
View

Developed a real-time license plate recognition system utilizing OpenCV and Tesseract OCR, achieving accurate text extraction through image preprocessing, contour detection, and OCR application. Captured and processed live video feeds to dynamically identify, store, and display license plate numbers, enabling efficient user interaction.

Python | OpenCV | Tesseract OCR

GitBud- GitHub Companion for Freshers
View

GitBud is an AI-powered GitHub repository visualization and code analysis platform that helps developers explore project structures, understand codebases, and identify potential issues. Built using React, FastAPI, MongoDB Atlas, and Hugging Face APIs, it provides repository summaries, code explanations, and bug detection through an interactive web interface.

React.js | D3.j s | Python | Hugging Face (LLaMA-3)

FlickFinder
View

Developed a full-stack movie discovery web application leveraging React (Vite), FastAPI, and the TMDB API to deliver real-time movie data and personalized user experiences. Implemented JWT authentication, RESTful APIs, and MongoDB Atlas for secure user management and persistent, cloud-synced watchlists. Enhanced application functionality with advanced search capabilities, dynamic movie detail pages, and tailored recommendations. Utilized TailwindCSS and Framer Motion to design a responsive and engaging user interface, incorporating Axios for efficient API communication and token management.
